What a fine snow.

The "up-to-date groundhog" is off on his spring weather, so we can't use the 2nd of February as a sure spring sign. But by the 27th or 28th of March we can tell whether the "old time groundhog" is the same today he was in our grandfather's and grandmother's time. At least, we hope for spring weather by that time.

But isn't it bad for Oliver Riley to be losing so many cows? One died Friday night and two Saturday.

From the movement of Geo. Estus and G. W. Tarbutton corn will be plentiful next winter in the Ozarks. They were at Sterling Gaskill's for seed corn Monday before noon.

The temperance meeting to have been held at No. 5 Saturday night was a failure. Though quite a crowd gathered at the school house, the leaders in the movement failed to appear, and that, too, after the boys had put in so much time preparing a program. A very poor example for the older persons interested to set before the young.

## To the Housewife

Madam, if your husband is like most men he expects you to look after the health of yourself and children. Coughs and colds are the most likely to lead to serious diseases. A child is much more likely to contract diphtheria or scarlet fever when it has a cold. If you will inquire into the merits of the various remedies that are recommended for coughs and colds, you will find that Chamberlain's Cough Remedy stands high in the estimation of people who use it. It is prompt and effective, pleasant and safe to take, which are qualities especially to be desired when a medicine is intended for children. For sale by all dealers.—adv.

Most of the farmers around here have been sowing oats, and the women have been setting hens.

## NOTICE!

The ninth and tenth days of April have been set aside as Special Claim Prevention Days.

While claim prevention is an every day feature, we want to make strenuous efforts to see if they can handle freight on the the days mentioned without a single cause for claim.

## REMINDERS:

The receiving clerk may help by seeing that he receives all the freight he signs for. He is the man who rejects consignments improperly prepared for shipment.

The trucker may help by careful trucking, and by being sure that the freight is loaded in the proper car.

The stevedore or loader may help by careful stowing and bracing and by supervising the work of the loader.

The car inspector and warehouse foreman may help by choosing suitable cars for loading, and by seeing that cars selected are free from nails and other projections, and from oil or other refuse which may injure the lading.

The switchman may help by avoiding unnecessary movement of the car, by careful signaling, and by making smooth couplings.

The engineer may help by prompt and careful observance of signals, and by avoiding sudden and hard application of air.

The conductor and brakeman may help by unloading and loading freight as though it were their own property, being cautious to see that it is put off at its correct destination, and by reporting instances of improper loading.

Separate record will be maintained covering errors made during the period in question and the results. I am sure, will prove interesting to all
